github.com/devone-hope · portfolio

Python engineer: backend, Telegram products, and LLM integrations. I ship services end to end — architecture, code, Linux deploy. I live in Da Nang, work remotely, and can follow Moscow time. Open to full-time remote roles and longer contracts.

STACK

Languages	Python, TypeScript / JavaScript, SQL, C++ (basic)
Frameworks	FastAPI, aiogram 3, React, aiohttp
Databases	PostgreSQL, Redis, MongoDB, PgBouncer
Infra	Docker, nginx, Linux, Kubernetes, AWS
AI / observability	OpenAI / Claude / Gemini API, OpenRouter, RAG, MCP, LangChain, Sentry, Prometheus, Grafana

EXPERIENCE

Independent engineer

Feb 2025 — present

Backend / AI, end-to-end products

Da Nang · remote · sole proprietor

- Built a HoYoverse top-up service (Genshin, HSR, ZZZ): admin panel, public API, PostgreSQL queue behind PgBouncer, workers with a dedicated Chrome and 3DS. Live product: genshinimpactautodotate.com.
- Shipped Telegram Mini Apps from scratch: TurboMMR (Steam OpenID, custom turbo MMR for Dota 2, leaderboards), tarot and sports-prediction apps on LLMs via OpenRouter with key pooling and Redis dialog memory.
- Ran a high-load Telegram service with a bot-copy factory — about 200,000 monthly users, connection pools, error monitoring.
- Heavy-machinery parser for EU import: three German marketplaces, AWS WAF bypass, Google Sheets sync, new listings pushed to the team Telegram chat.

AI Lab “Reshenie”

May 2023 — Jan 2025

ML / AI engineer (Python)

Kazan · remote

- Shipped a production photo-processing API: 11-VPS cluster (CPU and GPU), Kubernetes, FastAPI, nginx in front of two replicas, RabbitMQ. The service served a website and a Telegram bot; inference was a paid product.
- Adapted a single-threaded PyTorch checkpoint (.pt) for concurrent traffic — the upstream model was not built for production load.
- Built Telegram bots on aiogram with LLMs: user context stored outside the model, RAG, function calling, MCP; video and audio. Observability via Sentry, Prometheus, Grafana.
- Built multi-model LLM agents in Python: a crypto-market analyst (Gemini) and a browser-control agent via an extension.

Commercial freelance

Mar 2021 — Dec 2023

Python developer

Freelance · Profi.ru and direct clients

- Parsers for static and dynamic sites with Selenium, Playwright, andundetected-chromedriver: marketplaces, jobs, reviews — CSV export and Telegram alerts.
- Telegram bots with subscriptions and text/image generation, FastAPI payment webhooks. A car-sales bot with dynamic localization for different countries (Docker, PostgreSQL, Redis).
- Administered Ubuntu servers: nginx, Let’s Encrypt, fail2ban, Docker, users, and baseline hardening.

SELECTED WORK

Client code lives in private repos. Case studies and screenshots are in the portfolio; live demos where the client kept them public.

HoYoverse auto top-up

Live · Case

Full pipeline: API, panel, queue, workers, roles, deploy
Order from the panel or public API, account check, Chrome checkout with 3DS. Queue in PostgreSQL; scale is container count.

TurboMMR — Dota 2 rating Mini App

Case

Mini App, backend, bot, Steam/OpenDota, deploy
Steam login, custom turbo MMR, leaderboards and prize contests. React + FastAPI + aiogram, Redis, Docker.

Tarot service: WebApp + LLM spreads

Case

Mini App, LLM pipeline, payments, dialog memory
Spreads via OpenRouter with key pooling, Redis context, Tribute subscriptions, PostgreSQL, Docker on Linux.

Heavy-machinery parser (DE)

Case

Parser, WAF bypass, bot, Google Sheets sync
Monitors three German sites, sends hits to Telegram and a spreadsheet. One shared catalog instead of manual browsing.

EDUCATION

Secondary education

LANGUAGES

Russian — native
English — A2: I read technical docs and write simple emails; speaking is still limited

WORK FORMAT

Remote, full-time or a longer contract
Moscow hours, currently UTC+7
Sole proprietor, contracts with companies
